

Size Chart

With this chart you can compare the sizes of our shirts and short with your own shirt. To measure, spread the shirt out on a table and measure the distance between the armpits, from seam to seam.

Attention: This table is indicative. You are only certain of the correct size when you use our fitting sets. Incorrect sizing due to the use of these tables are no ground for complaints.

SHIRTS			
team size	collection size	chest circumference	width shirt between armpits
1		85,5	41,0
2	(S)	92,0	44,5
3		98,5	47,5
4	(M)	105,0	51,0
5	(L)	111,5	54,5
6	(XL)	118,0	58,0
7		124,5	61,0
8	(XXL)	129,0	63,0
9		133,5	65,5
10	(SL)	138,0	68,0

SHORT		
team size	collection size	hip circumference
1		93-97
2	(S)	98-102
3	(M)	103-107
4	(L)	108-112
5		113-117
6	(XL)	118-122
7		123-127
8	(XXL)	128-132
9		133-137
10	(SL)	138-142

High-tech on your skin

However much charm they may have, woollen cycling jerseys and shorts are really things of the past. Bio-Racer does everything it can to ensure that clothing doesn't stand in the way of any (top) performance. That's why we are continuously in search of the most advanced fabrics, threads, coating, combinations and applications.

- 

CARO
A very functional and super-elastic fabric that feels like a second skin. Easy to wash and quick drying. Offers resistance against mould and smells.
- 

LYCRA
A high quality, elastic variety of textile for cycling shorts, which guarantees an optimal wearing comfort. Carefully following the instructions guarantees far more riding pleasure.
- 

GAMEX
An elastic fabric made from polyester filament microfibre threads. Wind-proof, water repellent, very breathable, light and supple, stretch fabric and easy maintenance.
- 

WINDBLOCK
Windblock is a light elastic fabric which maintains the body temperature and protects against wind and rain.
- 

AIRTEX
This fabric was developed by Bio-Racer. It keeps your body dry and gives a comfortable feeling during physical exertion. Additional benefits: • fast removal of bodily fluid • increased air permeability • absorbs little fluid • extra softness prevents irritations • machine washable and quick drying • offers resistance against mould and smells.
- 

QUADRI
A new variety of textile which combines mono-elastic properties (with a positive effect on the fit of the shirt) to an exceptional removal of perspiration. Furthermore the fabric feels soft and pleasant to the touch.
- 

COOL LIGHT 100
Bio-Racer developed a lightweight cycling jersey for the Olympic road and mountain bike races and World Championships, which is worn by both the Belgian and Dutch national teams. With success! Because various Olympic medals and world titles have already been won in this shirt. The fabric which is incorporated into these jerseys, is Cool Light 100, an extremely

light variety of Coolmax. Micro-perforations create a larger breathable surface and allow the manufacture of shirts weighing less than 100 grams. No less than 70% lighter than a normal cycling jersey!

- 

TRANSOTEX - THERMASTAT
The insulating effect of the threads keeps the body extra warm. A roughened layer of Thermostat on the inside reinforces this effect. This results in very high breathable capacity with a fast removal of perspiration. The polyester surface is quickly dry and exceedingly strong.
- 

ISOLATION
The thread of Isolation has an insulating effect which keeps the body extra warm. High breathable capacity so that the perspiration is removed faster. The polyester surface is quickly dry and feels soft and pleasant to the touch.
- 

WINTER WINDBLOCK
During really cold weather an item of clothing with Winter Windblock quality is appropriate. A system with 3 layers protects the body against cold and wind. The innermost layer consists of 100% polyester. The fleece membrane offers outstanding protection against cold and rain and breathes as well. The upper layer not only retains its shape and is colourfast, but it provides the required insulation during cold days.
- 

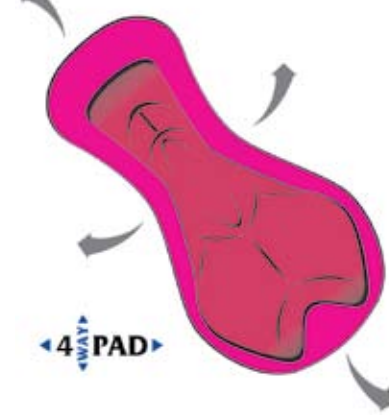

TEMPERATURE CONTROL
This elastic fleece is extremely suitable for chilly to even cold days. The roughened inside provides excellent insulation and through the use of polyamide threads the regulation of fluid is optimal.
- 

HUSKY
Functionality and comfort complement each other in this fabric. This so called fleece-fabric is made with microfibre polyester threads. Properties: • warm • moisture transporting and regulating • light to wear • easy to maintain
- 

AEROCOAT
In the sport of skating one hundredth of a second can make the difference between winning and losing. That's why Bio-Racer finishes off skating costumes with AEROCOAT. This is an aerodynamic coating in which the structure is the same as that of carbon fibre. This ultramodern coating/fabric stimulates muscle compression. This makes it possible to keep up intensive physical exertion for longer periods.
- 

ISOFILM
Isofilm is one of the best insulating membranes. Fabrics modified with Isofilm are waterproof, windproof, bi-elastic and breathable. On top of this, Isofilm is easy to maintain. Thank's to these attributes, Isofilm clothing is guaranteed to be efficient and comfortable.
